

BERGES INDIKATORER FOR NORSKE KOMMUNER

Kilde:

Erling Berge, The social ecology of human fertility in Norway 1970. University Microfilms, Ann Arbor 1981.

Beskrivelse:

Indikatorene klassifiserer kommunene i Norge etter 6 ulike sosial-økologiske faktorer:

1. Sosio-økonomisk status (SES/urbanization)
2. Familie/husholdsammensetning (Familism)
3. Trangboddhet (Deprivation)
4. Innslag av industrinæringer (Manufacturing industry)
5. Materiell velstand (Affluence)
6. Kvinners yrkesdeltakelse (Female economic activity)

Data fra NSDs kommunedatabank ble brukt til å lage 113 relative variabler. Av disse ble 60 brukt i en faktoranalyse til å definere 6 faktorer. Uten at faktorene endret seg, kunne en redusere tallet på variabler til 30. I tabellen på neste side gis det en detaljert oversikt over faktorvektene til de 30 variablene på hver av de 6 faktorene. Til sammenlikning er det også angitt faktorvektene til de samme variablene, i analysen med 60 variabler.

Selve indeksene består av faktorskårene til alle^{*} norske kommuner på de 6 faktorene. En kan regne de seks faktorskåreverdiene for å være en god beskrivelse av sentrale deler av den sosiale strukturen i en kommune i tidsrommet 1965-1975.

* Se egen merknad lenker ut.

2.

Sammenheng med andre indekser:

Berges indikatorer er en videreføring av et arbeid påbegynt av Frank Sweetser, med utgangspunkt i norske kommuner i 1960. Dette er beskrevet i

Frank L. Sweetser, Commune differentiation in Norway, 1960: A preliminary report on a factor analytic study. Sosiologisk Institutt, Bergen, 1970.

Arbeidet er også drøftet av Sweetser i

Frank L. Sweetser, "The uses of factorial ecology in classification". I M. S. Archer. red., Current research in sociology. Special issue of ISA Current Sociology for the VIII World Congress, Toronto 1974.

Merknad:

Seks kommuner er slått sammen to og to på grunn av størrelsen. I oversikten har de sammenslåtte kommunene fått egne nummer. Det gjelder følgende seks kommuner:

940 Valle og 942 Bykle slått sammen til 991.

1144 Kvitsøy og 1151 Utsira slått sammen til 1191.

1252 Modalen og 1266 Masfjorden slått sammen til 1291.

Manglende data for en kommune gir indikatorverdien 9999.0000.

Faktorvekter for 30 og 60 variabler på 6 faktorer. 448 norske kommuner.
